

ANALYSIS of DESIGN and ALGORITHM - LAB ASSIGNMENT
MCA I year II Sem

ASSIGNMENT NUMBER 3:

	Objective: <ul style="list-style-type: none">• Understand and implement Divide and Conquer strategies.• Apply Greedy Method for optimization problems.• Analyse time complexity and behaviour of the algorithms through practical coding.	CO	BL
Q.1	Binary Search Implementation: <ul style="list-style-type: none">• Task: Write a program to perform binary search on a sorted array.• Requirements:<ul style="list-style-type: none">• Implement both recursive and iterative versions.• Display the number of comparisons made.• Input: Sorted array of integers and a target element.• Output: Index of the element (or appropriate message if not found).	CO3	BL3
Q.2	Quick Sort Implementation <ul style="list-style-type: none">• Task: Implement the Quick Sort algorithm.• Requirements:<ul style="list-style-type: none">• Use a pivot selection strategy (first element, last element, or median).• Track the number of comparisons and swaps.• Input: Unsorted array of integers.• Output: Sorted array.	CO3	BL3
Q.3	Strassen's Matrix Multiplication <ul style="list-style-type: none">• Task: Implement Strassen's algorithm for matrix multiplication.• Requirements:<ul style="list-style-type: none">• Handle matrices of size $2^n \times 2^n$ (padding if necessary).• Compare execution time with conventional matrix multiplication.• Input: Two matrices.• Output: Product matrix.	CO3	BL3
Q.4	Greedy Method Algorithms <p>Minimum Cost Spanning Tree (MST)</p> <ul style="list-style-type: none">• Task: Implement Prim's and Kruskal's algorithms to find MST.• Requirements:<ul style="list-style-type: none">• Print the edges included in the MST and total cost.• Input: A connected, weighted undirected graph (using adjacency matrix or adjacency list). <p>Output: MST and total minimum cost.</p>	CO3	BL3

ANALYSIS of DESIGN and ALGORITHM - LAB ASSIGNMENT
MCA I year II Sem

Q.5	Knapsack Problem (Fractional) <ul style="list-style-type: none">• Task: Solve the Fractional Knapsack Problem using a greedy approach.• Requirements:<ul style="list-style-type: none">• Items should be sorted based on value/weight ratio.• Allow taking fractions of an item.• Input: Arrays of weights, values, and the capacity of the knapsack.• Output: Maximum value that can be put in the knapsack.	CO3	BL3
